Kennas is proudly the largest Xero accredited consulting firm in CQ, meaning we can assist you with setting up Xero, training and providing support along the way.

As technology has changed, there have been new accounting programs introduced to the market which have assisted our clients in understanding their financial situation more and strengthening our relationship with them. Xero is a cloud accounting software written for Business Owners (not Accountants) making it easier to use.

Xero accesses data from your bank on a daily basis and can auto suggest coding based on bank rules you create or by matching transactions already posted, saving you hours of time. Bank reconciliations as you probably know them will be a thing of the past.

Functionalities such as Integrated Payroll, Superstream compliance and Accounts Receivable and Payables can be included based on your requirements.

As Xero is internet based, we are able to view and access the same information as you, which means we can quickly and easily assist you with any processing queries, and any accounting adjustments (such as year-end journals) can be made directly to your file.

RUN YOUR BUSINESS FROM ANYWHERE

Access your business finances anytime, from any internet-connected device – phone, tablet, or computer.

DATA YOU CAN TRUST

Direct feeds from banks, software applications and financial institutions mean that data is untouched by human hand as it enters Xero. Xero's wide range of security and detection measures enable tracking of who does what and if issues are detected, alerts are raised.

UNDERSTAND YOUR REAL-TIME CASH POSITION

Know how you're doing financially with daily updates from your bank accounts and credit cards.

GET PAID FASTER FOR BETTER CASH FLOW

Easily create and send invoices with online payments and invoice reminders for quicker payments.

PROTECT YOUR BUSINESS DATA

Xero backs up your data and protects it with multiple layers of security including industry-standard data encryption and secure data centres. Online backups are updated throughout the day, every day, and stored in multiple secure locations. Xero also offer two-step authentication as an additional layer of protection for your Xero account.

Data is encrypted using industry-standard data encryption, multiple layers of firewalls are in place, all access to our data centres and servers is controlled and monitored 24/7, and we perform regular security audits.
